

# Thank you for downloading Trase data

Our vision for Trase is that it will become the go-to source for supply chain transparency information by 2021. The data available provides unprecedented information about agricultural commodity supply chains. We believe this data can be of great value for a number of different users. We hope that you find it useful for your work.

We are very keen to hear about user applications of the data, so whether it be a query, a request, or a new project that you are embarking upon, please get in touch with us via [info@trase.earth](mailto:info@trase.earth).

Before you get started, we ask that all users review our terms of use. We also encourage you to read a summary of our data and methods and review our frequently asked questions.

If you are interested in more detail please read our manual on the supply chain mapping methods (SEI-PCS) that underpin Trase, as well as a factsheet on the latest version of the SEI-PCS model.

Thanks again for your interest in Trase.
